PROEL GROUP COMPANY

PROEL XENIA: NEW SPEAKERS SERIES FOR HIGH PROFILE INSTALLED APPLICATIONS!

XENIA is a series of speakers designed specifically for high-profile installed sound applications and featuring contemporary Italian styling and advanced technical solutions.

All of the models in the XENIA range utilize high-definition dome tweeters and high-efficiency woofers providing superior quality, full-range sound for a wide scope of installations where the sound system must blend perfectly into a stylish environment.

The innovative wall bracket with integral connections and 120° horizontal and vertical rotation, offers excellent versatility and the fastest installation of its kind.

The three different surface-mount models available suit any kind of installed sound system. X30T is a model specific for paging and background music in environments (shops, restaurants, offices, ecc.) requiring unobtrusive, small size speakers, able to provide a good SPL and a high-quality sound. X50T is ideal for a variety of applications requiring a full-range sound in a limited space, such as bars, pubs, department stores and outdoor venues. It delivers an extended response with deep lows and clean, well-defined highs.

The X80T model - able to provide a high SPL

and an amazing extension at the low frequencies - is perfect for large areas such as shopping malls, stadiums, airports or for high-power music installations.

The X80A model is designed to be used in installations where central amplifiers are not available or as a mobile P.A. system.

One ceiling and one in-wall model, featuring the same high-quality sound and stylish design, complete the series.

In January the whole XENIA Series will be presented in preview at the next NAMM edition in Los Angeles and will be available for sales in the first quarter 2010.
