

# THE GOV<sup>NOR</sup> + LM30 Loudness Monitor

## NEW! Sound System Limiter and Loudness Monitor Package from Fitness Audio

Introducing *The Gov<sup>nor</sup>*! Our Sound Pressure Limiter that puts the brakes on the loudness level and make it easier for Fitness Clubs, Function Centres, Shops, Pubs and Clubs comply with Occupational Health & Safety Laws regarding noise in the workplace - when that “noise” is pre-recorded music with our without a fitness instructor or DJ talking over the top of it.

Use it in the manual mode and set it up referencing a handheld SPL Meter for the noise level limit or link it up to it's companion product *The Trigger Loudness Monitor LM-30* and have a 24/7 control over how loud the sound system will play irrespective of whether the room is full of bodies or just with a few.

*The Gov<sup>nor</sup>*'s front panel features an attractive Green to Yellow to Red Left & Right LED Bar display that gives a visual indication of how loud the system is playing to the operator and there's nothing else to touch apart from the power on/off switch.

The 4 controls on the back are protected by a security panel that can be set and sealed with wire seals against tampering.

*The Trigger* repeats the twin bar display but can be mounted on a wall between speakers in either a vertical or horizontal position and can show the Loudness Level in the room from 79dB to 109dB in 3dB steps using either “A” or “C” weighting.
